

-Semester Project 6

Front End- Design Document <**GROCERY STORE APP**>

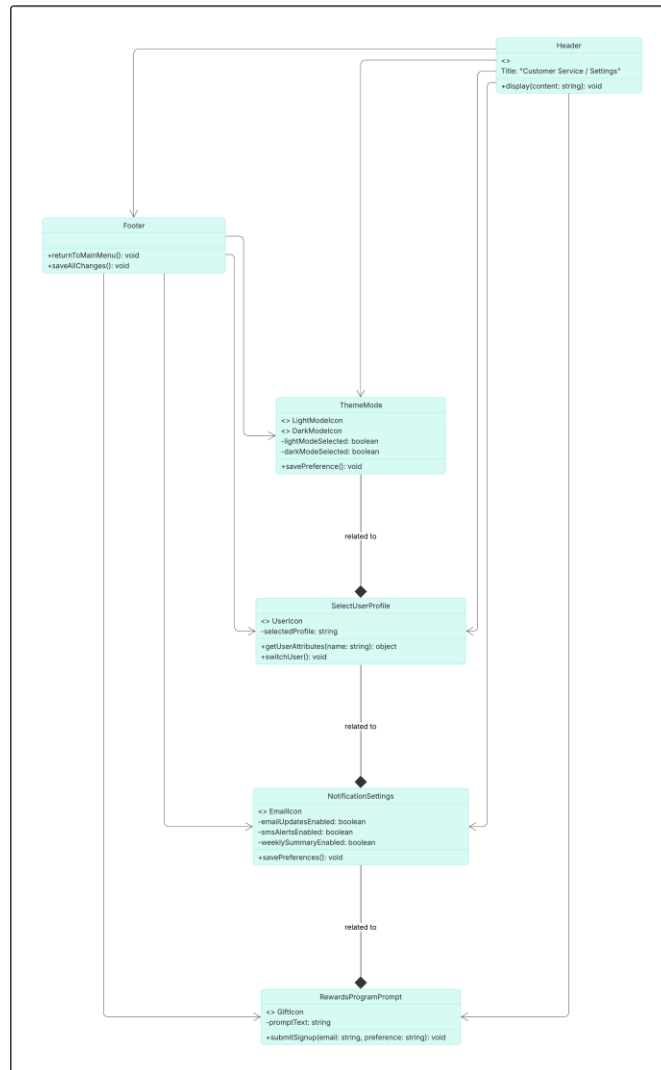

Members: Omar Abdelkhaleq (w10193627), Evans Smith (w10194669), Ryan Mitchell (w10190111) Kristian Day(w1031680), Christopher Chilton (w10132311)

Project Background

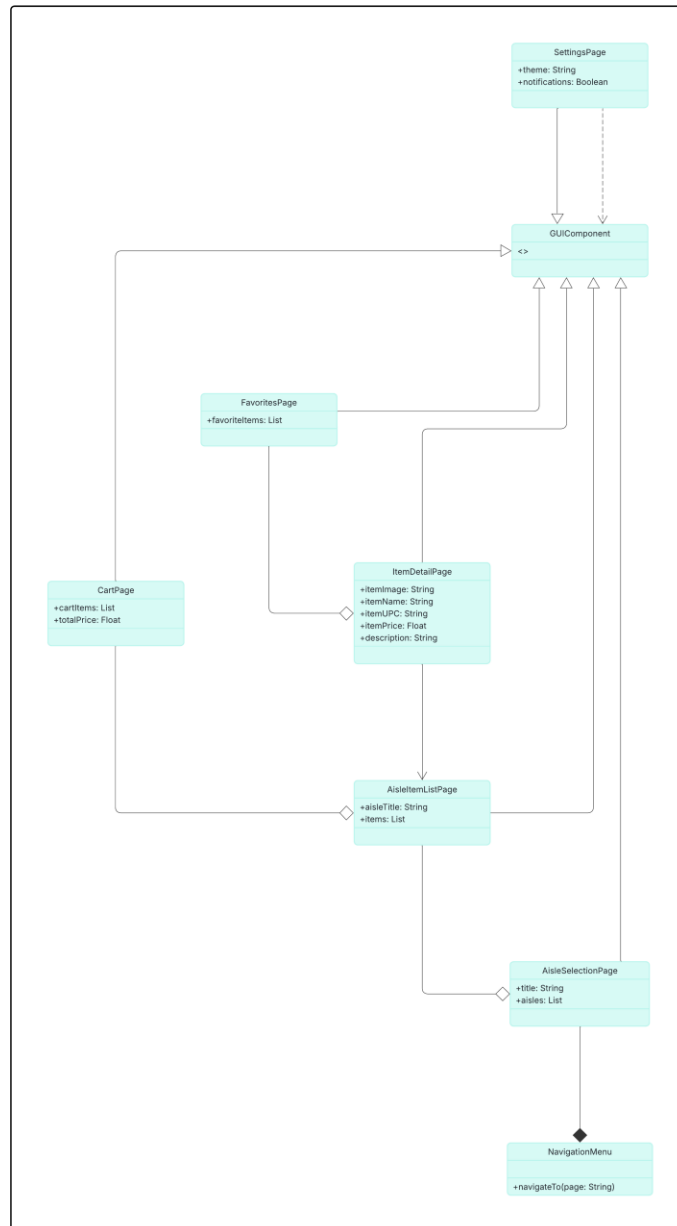

This project simulates a standard size grocery store. The purpose of this project is to demonstrate a store inventory and how to shop effectively as a customer, illustrating how easy it can be to overspend amid rising costs. The group is inspired by this project from its flexibility in changing and modifying elements.

Project Functions and Features

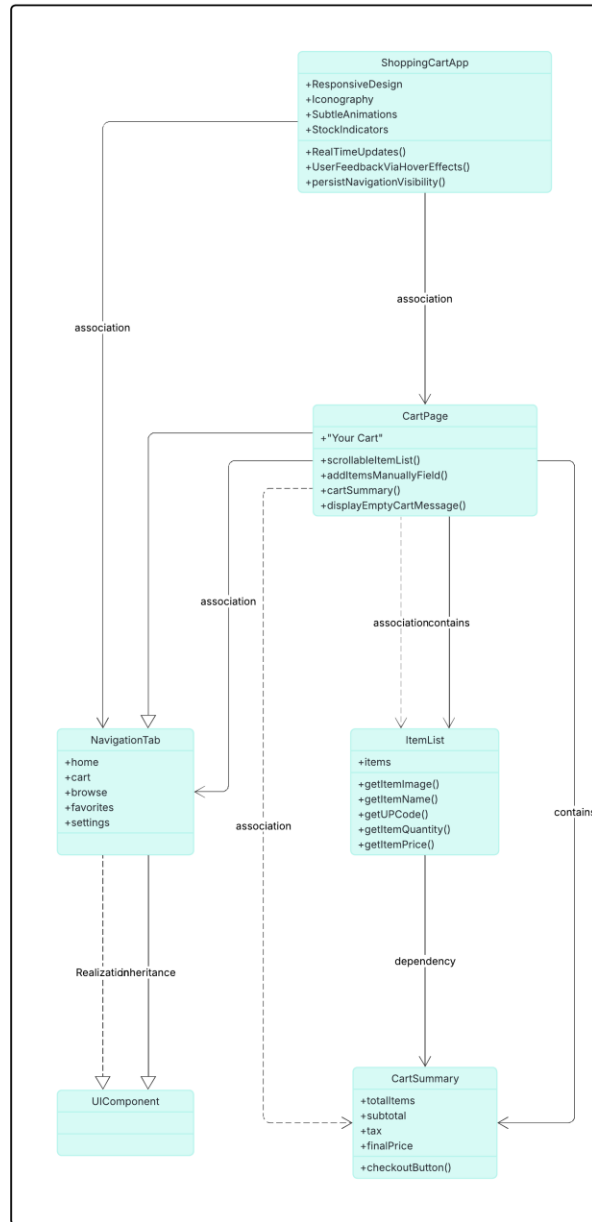

- Customer service/settings
 - Gives the option to run the program in dark mode.
 - Choose a person at the beginning of the program. Each person has certain attributes such as their name, cash in hand, etc.
 - Be prompted at the end of the program to opt in or out of a rewards program by entering your email.
 - Follows Requirement 4: The application must implement at least 3 user preferences and be changeable.

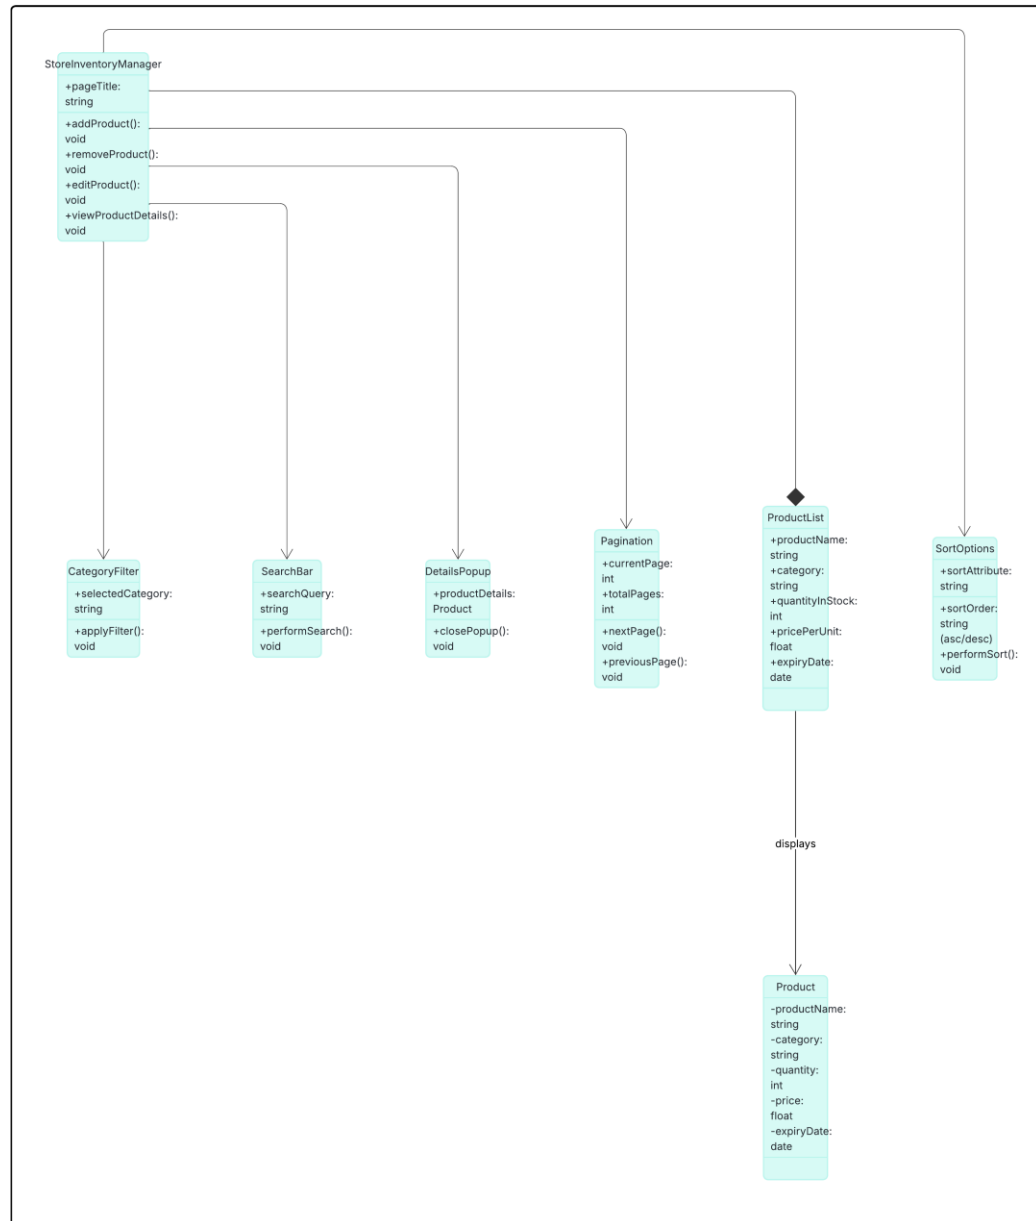

- Aisle & Item Searching
 - Choose which aisle of the store to enter at the start of the program (i.e. canned goods, fresh items, frozen, etc.
 - Each aisle has a variety of items containing their respective name, UPC code, price, and/or other features.
 - (Optional) Images for each item within the aisles for better identification.
 - Fulfills Requirement 1: The application must implement a GUI interface as its primary user interface.
 - Fulfills Requirement 2: The application must have at least 5 distinct pages that can be navigated to (aside from a settings page).

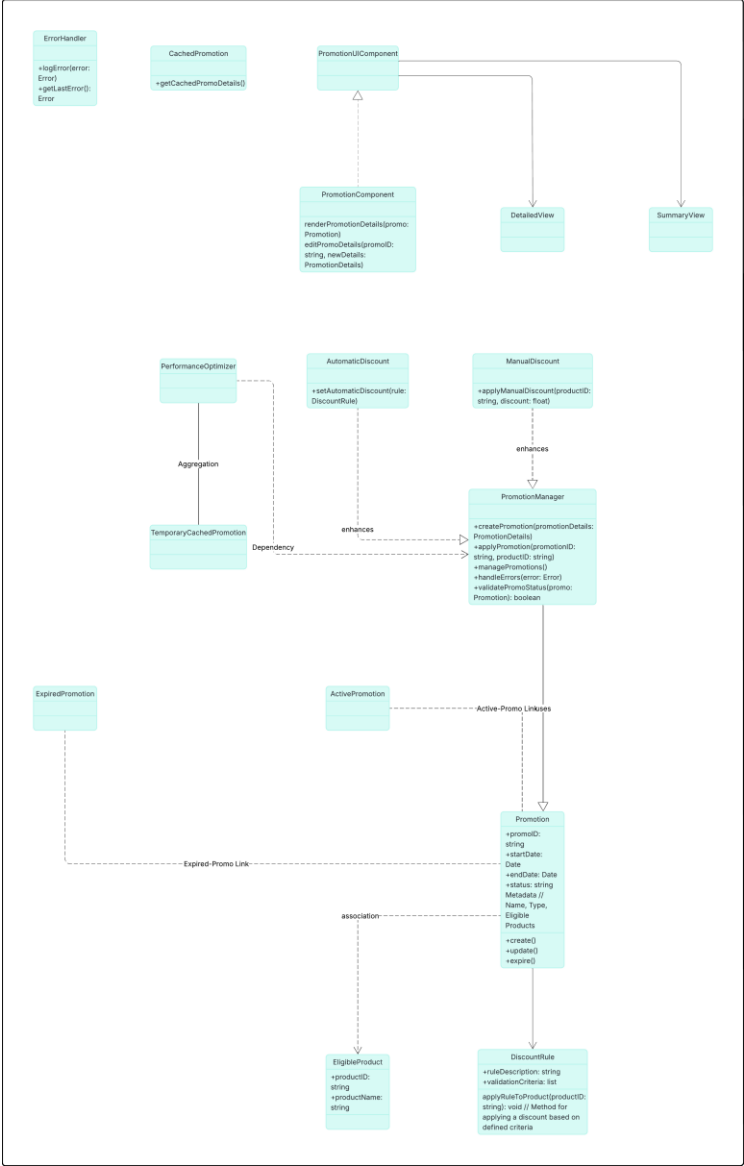

- Shopping Cart / Checkout
 - Allow users to add, remove, and view items in their shopping cart using the UPC code (or another method).
 - Offers a real-time list of the cart (including item names and quantity of each item) and the option to check out and calculate the final price.
- (Optional) Images to display items in carts for better identification.
 - Fulfills Requirement 3: The application must have at least one of the following navigation systems: Navigation Tabs

- **Store Inventory Manager**
 - All grocery items will be stored that can then be added, removed and or edited.
 - Upon transaction processing, all grocery items selected are removed from the inventory.
 - Fulfills Requirement 5: The application **MUST** store user generated data and be reloadable if the application opens again.

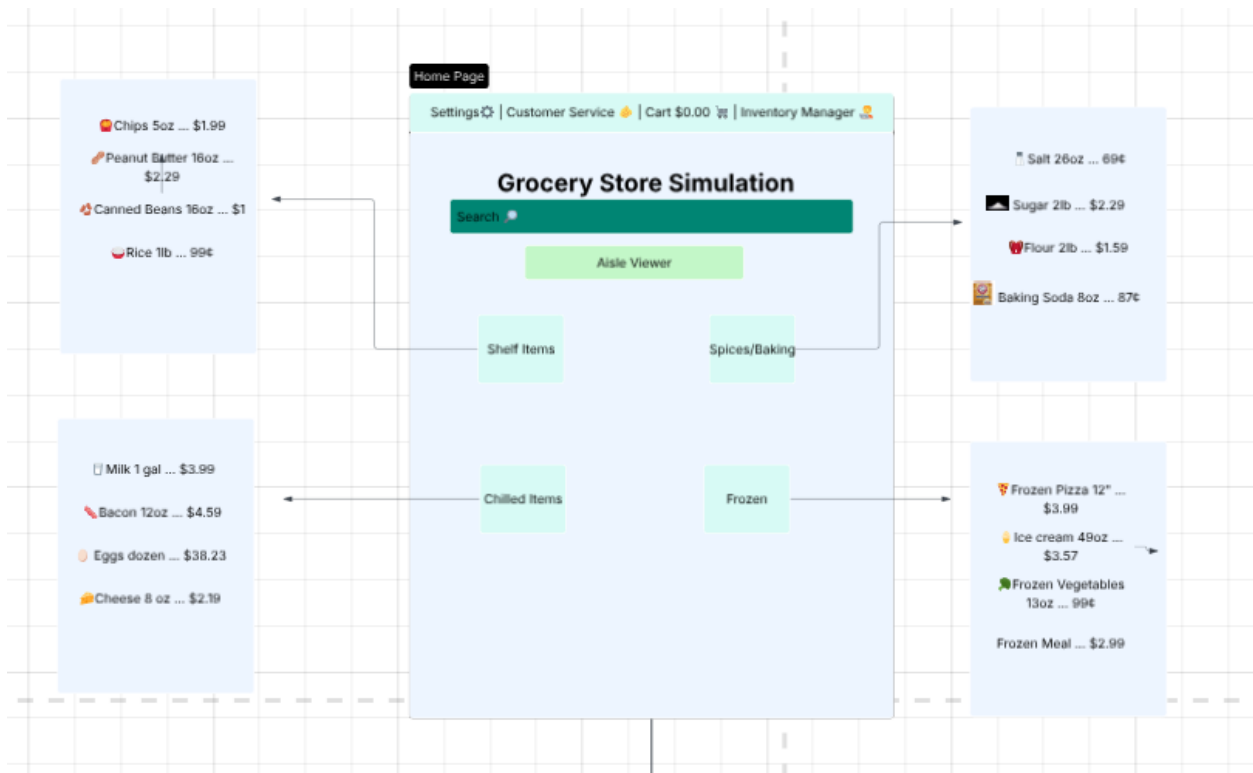

- Promotions & Discount Manager
- Handles promotions, discounts, and/or coupons.
 - Allow the use of discount codes during Customer Checkout.
 - Used an automated discount system (i.e. 10% off, BOGO, 2 dollars off, etc.)

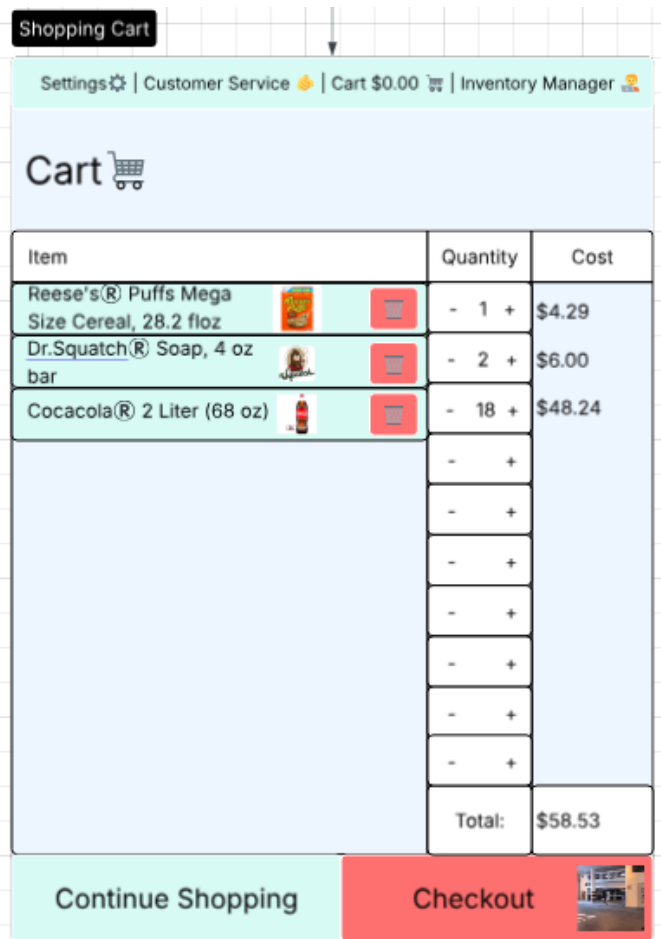

View Prototypes <EVERYONE HELPED OUT!!! >

I. Prototype PT1

This is the homepage of the Grocery Store app. Going with the buttons for Home, Settings, Customer Service, Cart, and Inventory Manager. Below are buttons for different aisles continue lower for functionality to search aisles with buttons for sections within.

II. Prototype PT2

This is the shopping cart page which includes the item, quantity of the item, individual cost and final cost. It will display the item with size descriptions and a picture. It also allows users to add, remove and view items in their cart.

IV. Prototype PT4

TAP TO PAY

UI for the customers to check out the products they have selected. Functions to insert information to complete transaction with a button to confirm.

V. Prototype PT5

The page will serve the main function of allowing program users to edit the display of the program, manage account settings, manage notifications and other features.

VI. Prototype PT6

This page will serve as a main visual representation of the store for users of the program to find the core items they are searching for based on the categories of the items. This page will feature specific categorized isles such as canned goods, spices, frozen section and chilled section.
